The PPM+/Leeds Care Record platform has been updated to make improvements to the GP tab. The GP data which is found on the 'General Practice' tab within the Single Patient View will now provide you with a richer set of GP information using the NHS Digital's GP Connect product.

Through previous clinical engagement, it has determined that the GP Connect product is richer in content than the previous product used (MIG2), and has features such as linking medications to problems and encounters which clinicians find useful.

This table compares the previous (MIG2) GP summary page to the new (GP-Connect) summary page;

PREVIOUS	NEW	
General Practice (MIG2)	General Practice (GP-Connect)	
Current Problems (Major only)	Summary messages incl. warnings	
Current Meds	Active Problems and Issue	
Allergies	Current medication issues	
Recent tests	Current repeat Medications	
	Current allergies and adverse reactions	
	Last 3 Encounters	

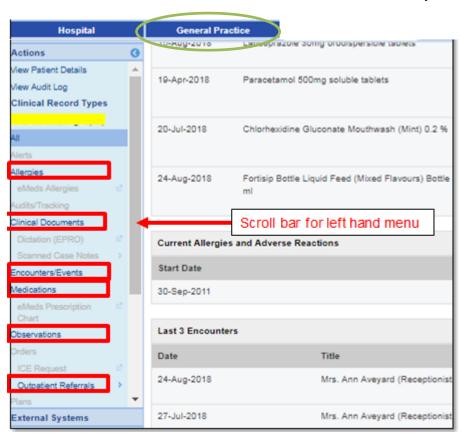

The net result is that this page will always be a page you need to scroll to the bottom, because there is a vast amount and useful data.

(Allergies and Last 3 encounters)

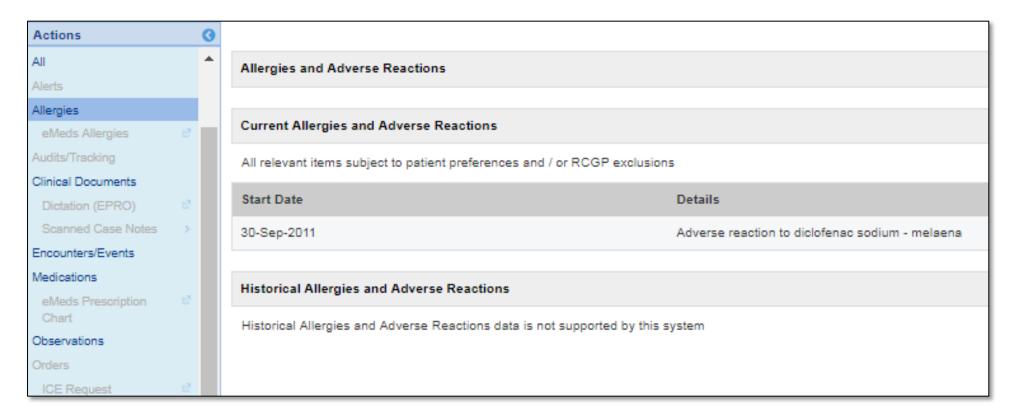

Tip: Using your keyboard, press: **CTRL + F** to open a search box and type the particular item you are searching for.

### **Left Hand Menu**

The GP-Connect tab has a left hand menu, in the same way the previous General Practice (MIG2) tab had.

## **Allergies**

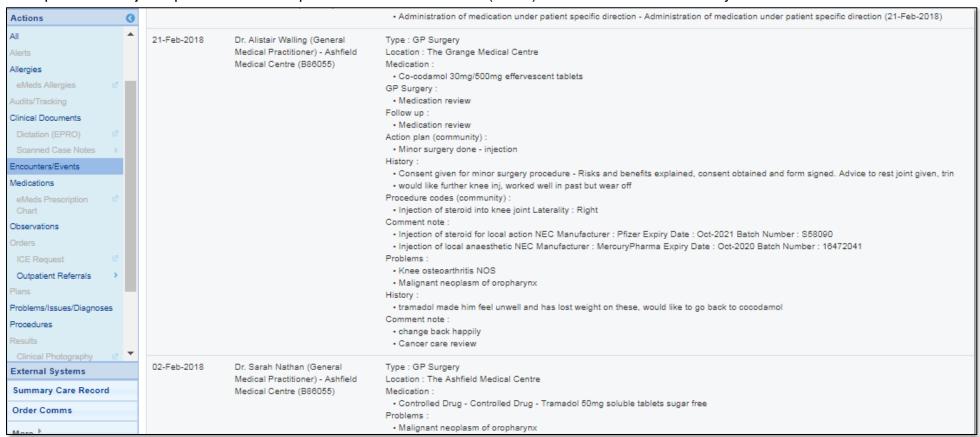

This option contains the same information as the previous General practice (MIG2) tab had.

### **Clinical Documents**

Ignore this option - it has been incorrectly mapped and will be removed when development resourcing allows

## **Encounters/Events**

This option is a major improvement to the previous General Practice (MIG2) tab. Consultation summary notes are now viewable:

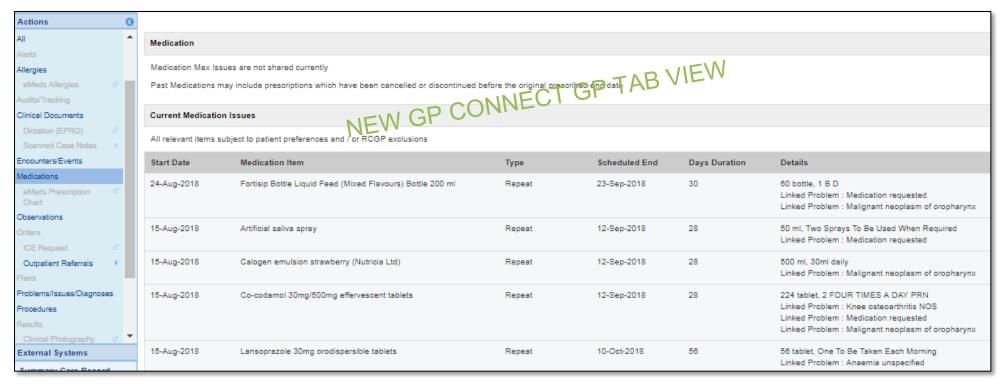

If a user wants to know why a patient is on a particular medication, tracing the initial issue date, to the encounter on that date will provide context.

#### **Medications**

The layout of this page compared to the previous General Practice (MIG2) page appears quite different, but actually contains the same information, often in more detail.

## The General Practice Tab - GP Connect

GP Connect displays in a single page which means a user will usually need to scroll down a very long page to get all the information (TIP: CTRL + F to open search box)

The order of the GP-C page is;

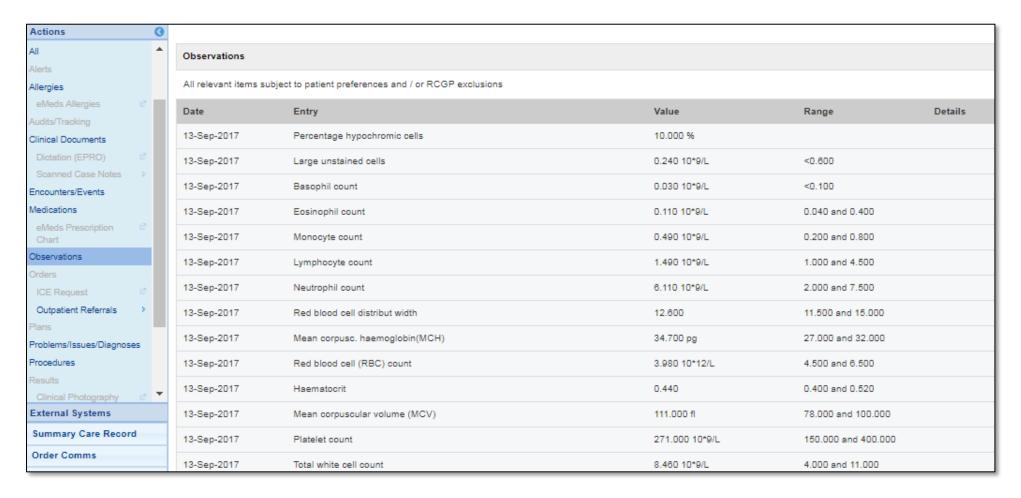

- Summary messages incl. warnings
- Current medication Issues
- Current repeat Medications
- Past Medications

However the beauty of this page is that medications are usually linked to a problem, giving a richer insight as to why the patient has been prescribed specific medications.

NB. Be aware that the order of the columns in the GP Connect Medications view varies between sections.

#### **Observations**

In the previous General Practice (MIG2) tab, 'Observations' is just blood pressures recorded over time. GP Connect 'Observations' is enormously richer, but the detail can be overwhelming and a user will usually need to scroll down a very long page to get all the information. (TIP: CTRL + F to open search box)

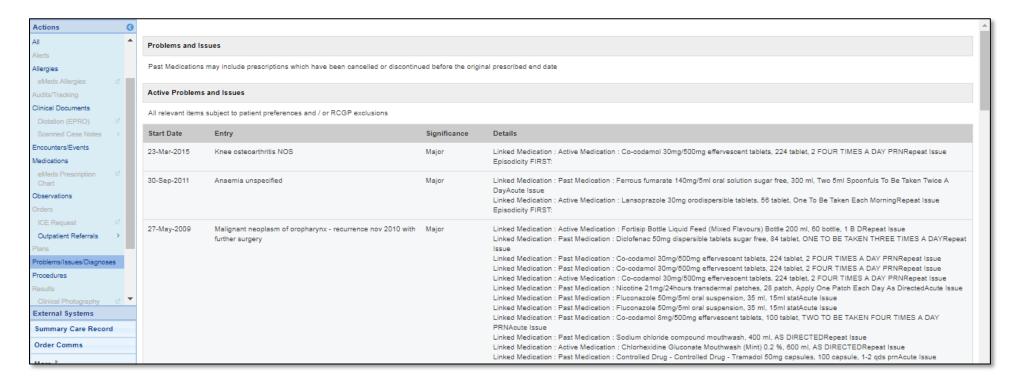

## **Outpatient Referrals**

Contains similar detail to what was displayed on the previous General Practice (MIG2) tab.

## **Problems/Issues/Diagnosis**

Another very rich set of information, unfortunately meaning that a user will usually need to scroll down a very long page to get all the information. (TIP: CTRL + F to open search box)

Again, problems are linked to medications.

(TIP: Users have reported that being able to take the date a problem is recorded, and navigate to the Encounters entry for that date can be enormously useful in obtaining a holistic view of the interaction between GP and patient)

# The General Practice Tab - GP Connect

### **Procedures**

This page usually only includes Immunisations, but again the detail is richer than the previous General Practice (MIG2) page.
